

Atlas Transport

Smarter Control for Grain Facilities

Making Every Grain Count

Atlas Transport takes full control of your grain handling — from intake to storage and outloading — ensuring smooth, automatic, and intelligent flow through your entire facility.

Scheduling & Auto-Pit

plan and run transfers automatically

Multi-Destination Queue Scheduling

manage multiple routes in sequence

Intelligent Routing

conveyors and elevators
auto-selected for each path

Route Map Visualization

clear overview of every grain movement

Blockage Detection & Resolution

stay protected from downtime

Preventive Maintenance

smart alerts before faults occur

Notifications on

Process Completion

know when each transfer ends

Built for Efficiency & Safety

Atlas Transport coordinates every component in your system, saving time and preventing errors. Operators select only the start and end points — Atlas does the rest.

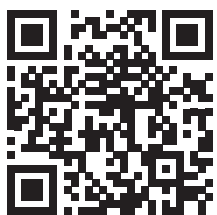

- Seamless operation with less supervision
- Real-time feedback and alarm handling
- Faster, safer, and cleaner transfer cycles

One Platform. Total Control.

As part of the Atlas ecosystem, Transport integrates with all other modules, dryer controllers and smart storage control, providing one interface for your entire facility.

- Unified control of all plant operations
- Remote access and live performance data
- Predictive insights and full traceability

Flow Smarter. Work Safer.

Atlas Transport reduces human error, increases throughput, and keeps your grain moving — intelligently.
